Colorado Forestry Association

- **The Problem:** It is MORE than just pine beetles. Lodgepole pine, ponderosa pine, spruce, and fir are all under attack.
- **The Impacts:** Colorado's water quality and infrastructure within the forest are at risk. Catastrophic wildfires will threaten lives and property.
- **What Can Be Done:** Treatment includes: removal, chipping, or debarking. Preventative spraying works in certain cases.
- **Healthy Forests are the Goal:** Our forests need careful management. Wood markets drive and sustain healthy forests.
