

A lot of wood
A lot of questions
No answers

Why can't this wood be put through a fast pyrolysis unit, the syngas be used to run the process, the bio-oil be added to coal to generate electricity, and the char be sold or used as a soil ammdement?

Letting it rot will produce CO² and methane with no benefits.

Burning the piles will produce CO² and smoke with no benefits.

Why can't it be put to beneficial use in a fast pyrolysis unit, release no methane, and generate electricity?
